

Environmentally Friendly Concrete Floor Polishing & Maintenance System

The Vortex Polishing system gives you an environmentally friendly way to achieve, and maintain, a high polish on concrete floors, for a fraction of the cost of traditional methods.

The Vortex Polisher is a specially modified propane burnisher that uses patented technology for lowest emissions and best fuel economy of any 18 HP propane burnisher. It uses proprietary diamond dots, on a flexible pad, to polish the floor.

- Vortex's flexible driver follows the contours of the floor resulting in a polished surface with uniform appearance- no need to grind the floor flat in order to polish it.
- Vortex's ability to polish without grinding preserves the hardest and most wear resistant part of modern concrete floors – the hard troweled surface layer.
- Polishing concrete floors increases light reflectivity; the abrasion resistance of the concrete, and is easier to clean, reducing time spent cleaning and wear and tear on cleaning equipment.
- Low profile design reaches under shelving.
- Slurry/ dust shroud effectively contains concrete slurry eliminating for the need for protective masking in most applications.
- Wet polishing eliminates airborne silica dust common to dry polishing systems.

Maintain the polish using Vortex **Clean N Polish** pads on an auto scrubber or buffer - all for less than \$0.05 per square foot, per year.

Vortex **Clean N Polish** Floor Pads effectively clean without chemicals (except for greasy or oily stains).
